

PRODUCT DESCRIPTION

IMG® Radiator Sealer quickly eliminates minor cooling system leaks without clogging or damaging other cooling system components found in passenger vehicles and trucks.

FEATURES

- Stops leaks in radiators, engine blocks and heads, and in hoses and other components of cooling systems found in passenger vehicles and trucks.
- Restores effectiveness of seals in engine water pumps, thermostats, and heater control valves.
- Prevents the formation of hard calcium deposits inside radiators and engine blocks.
- Contains corrosion inhibitors to prevent rust and corrosion within cooling system components.
- Safe for all cooling system components.

DIRECTIONS FOR USE

Apply IMG® Radiator Sealer ONLY to a warm engine (But NOT to a hot radiator, engine, or cooling system).

1. Turn off engine and allow it to cool.
2. Remove the radiator cap.
3. Make sure that there is sufficient water or coolant in the radiator to at least cover the radiator core.
4. Turn on the engine and allow it to operate at idle for about 10 minutes with the heater set to its hottest setting.
5. Shake the bottle of IMG® Radiator Sealer well.
6. Pour the entire, 12 fl. oz. bottle of IMG® Radiator Sealer directly into the radiator.
7. If needed, fill the cooling system with water or the appropriate antifreeze or coolant, to the correct level, as recommended by the engine manufacturer.
8. Carefully replace the radiator cap.
9. Allow the engine to continue operating at idle for about 10 minutes to circulate the IMG® Radiator Sealer through the system and seal the leak.
10. If the leak does not stop, or if it re-starts, then a repair or replacement of mechanical components may be required.
